FINAL[®]
ALL-WEATHER BLOX

PLEASE READ THE LABEL COMPLETELY BEFORE USE
By law this product must only be used as specified on the label
HSNO Classifications 6.1E, 6.9B, 9.1D

WARNING
This substance may be harmful if swallowed.
PRECAUTIONS
DO NOT lay baits in places accessible to children, pets and domestic animals.
Wash hands and exposed skin before meals and after work.
DO NOT store near food or feed.
Dispose of carcasses by burning or burial.
Dispose of empty containers and unused or unopened baits by burying in an approved dump.

FIRST AID
If swallowed, DO NOT induce vomiting. For advice, contact the National Poisons Centre 0800 POISON (0800 764766) or a doctor immediately.
Treatment of Domestic Animals: Depending on the amount eaten, this bait may kill or injure dogs, cats, pigs, poultry and wildlife. DO NOT place baits in locations which are accessible to pets, domestic animals, livestock or birds. DO NOT contaminate dams, waterways and drains with the bait or its used container. Vitamin K1 is an effective antidote against accidental poisoning of domestic animals by FINAL ALL-WEATHER BLOX. Practising veterinarians have been provided with information on Vitamin K1 and should be consulted.
Note to Physicians and Veterinarians: Brodifacoum, the active constituent of FINAL ALL-WEATHER BLOX, is a long acting anticoagulant chemical, which if ingested by humans, domestic animals or pets, can reduce the clotting ability of the blood and haemorrhage may result. Vitamin K1 (Phylomenadione) should be administered urgently by medical, appropriate para-medical personnel or veterinarians. If administered intravenously the injection must be given slowly.

GENERAL INFORMATION
FINAL ALL-WEATHER BLOX is formulated for use indoors and outdoors. It will control rats and mice, including those that may be resistant to Warfarin. Pre-baiting is not required as individual rodents can readily consume a lethal dose at a single feeding. Most deaths occur 4 to 7 days after consumption of bait. Max blocks are particularly suitable for use in damp situations and sewers, and crop stores where the risk of contamination should be minimized.

DIRECTIONS FOR USE			Critical Comments
Situation	Pest	Rate	
In and around Industrial, commercial, public services, agricultural and domestic buildings, and perimeter fencing.	Rats and Mice	1 to 3 blocks/bait station	Set out baits in places frequented by mice and rats. For rats: Place 1 to 3 blocks at intervals of 5 to 9m in infested areas. For mice: Place single blocks at intervals of 2 to 3m in infested areas. DO NOT exceed 3m between bait stations for mice or 9m for rats. DO NOT place bait stations in the open. Ensure baits are inaccessible to children, pets, domestic animals and wildlife.

6455-3

Baiting strategy

- Eliminate as far as practical, all alternative food sources.
- Locate baits under cover, along walls or rafters and in dark sheltered spots where there are signs of rodent activity. Nail in place if necessary to avoid spillage. Use with an appropriate bait station.
- Record the number and location of bait stations for the purpose of replenishment and later removal.
- Inspect baits regularly.
- Replenish weekly until no more bait is taken. If taken quickly, increase number of baits.
- Baiting for at least 2 weeks will be necessary to reduce rat/mouse numbers.
- Ensure baits are removed when rodent activity has ceased.
- Alternatively, pulse baiting may be used. Leave bait in place for 2-3 days, remove bait and repeat 7 days later.

For rats: Use 1 to 3 blocks depending on the level of infestation.
For mice: Use single blocks.

Note: Typically, one feeding is sufficient to kill rats and mice. Rats and mice may continue to eat the bait after a lethal dose has been eaten.

STORAGE AND DISPOSAL

Containers which have held bait should not be used for any other purpose. Store the closed, original container in a cool, dry place out of the reach of children. DO NOT store in direct sunlight. Dispose of empty containers and unused or unopened baits by burying in an approved dump. Look for dead rats or mice, burn or bury them. Ensure baits are removed when rodent activity has ceased.

WARRANTY

This formulation is warranted to contain the specified active ingredient within accepted and analytical tolerance when packed. The user bears the risk for damage resulting from factors beyond the manufacturer's control. The manufacturer declines all liability for damage resulting from improper storage or use of the product.
